Department of Otorhinolaryngology - Rhinology

ENT Outpatient Clinic Letter

Patient	Mattia Smacchia
Date of birth	07/06/1980
Hospital no.	NBH-4471902
Address	14 Larkspur Row, Northbridge NB4 7QT

Clinic date: 10 September 2026 Typed: 12 September 2026

To: Dr H. Varga, Larkspur Medical Centre (GP)

From: Ms P. Oyelaran-Hughes, Consultant Rhinologist

Diagnosis

1. Chronic rhinosinusitis with nasal polyps, recurrent after FESS (May 2021).
2. Aspirin-exacerbated respiratory disease.
3. Severe eosinophilic asthma on mepolizumab since April 2023.

Findings

Mr Smacchia reports six months of worsening nasal blockage and near total loss of smell. SNOT-22 score 48 (was 22 in 2024). Nasal endoscopy: bilateral grade 2-3 polyps, total nasal polyp score 5/8. No purulence. His chest is well controlled on current treatment.

Plan

His sinonasal disease has progressed on mepolizumab while his asthma remains controlled. Given the dual indication, I have discussed switching biologic to **dupilumab** with the severe asthma team, who agree. They will issue the prescription and arrange training. Mepolizumab should stop; the last dose was given on 8 September 2026.

Continue mometasone nasal spray and saline irrigation. Avoid all NSAIDs, including aspirin, as before. Revision surgery is not recommended at present.

Follow-up: ENT clinic on **3 December 2026** to assess response (an appointment letter will follow).

Yours sincerely,
Ms P. Oyelaran-Hughes FRCS (ORL-HNS)
